Challenge
Cross-number

This is a cross-number puzzle. Clue numbers have been shuffled.

Note that the numbers used in this challenge are from a constructed language (conlang), not from an actual human language.

Each white cell contains exactly one digit. So, for example, one across (four cells) is a four-digit number, while one down (five cells) is a five-digit number.

Numbers in the grid do not start with zero.

Questions:

- What is 5-across?
- What is 4-down?
- What is 11-across?
